Lipid-Mediated Signaling (Methods in Signal Transduction Series)

As the highly anticipated update to *Lipid Second Messengers* (CRC Press, 1999), **Lipid-Mediating Signaling** is a current and comprehensive overview of research methods used in lipid-mediated signal transduction. Pioneering experts provide a much-needed distillation of a decade's worth of advances in research techniques that are pertinent in understanding how lipid-mediated signal transduction ties to pathologic disorders.

Part I describes methods used to identify activities of and assay the expression of different enzymes involved in lipid-mediated signaling. *Part II* highlights the use of mass spectrometry to ascertain the lipid content in various systems. *Part III* contains two chapters devoted to techniques used to determine the role of lipids in the activation of gene transcription. *Part IV* rounds out the book's solid coverage by focusing on methods used to assess fatty acid uptake and metabolism.

Lipid-Mediating Signaling is an unrivaled reference for this rapidly expanding, yet resource-limited field, and it is a valuable resource for cell biologists, biochemists, and pharmacologists, as well as for researchers studying signaling transduction.
