## The Biology and Conservation of Wild Canids

No group of wild mammals so universally captures the emotions of people world-wide than do wild canids. That emotion can be enchantment and fascination, but it can also be loathing, because the opportunism that is the hallmark of the dog family also leads them into conflict with humans. In the developed world at least, the fascination with wild canids doubtless stems from people's captivation with domestic dogs - everybody feels they are an expert on canids! While most people may be familiar with only the better known members of the dog family, such as the grey wolf and the red fox, there are in fact 36 species of wolves, dogs, jackals and foxes. They attract hugely disproportionate interest from academics, conservationists, veterinarians, wildlife managers and the general public.

This book brings together in single volume an astonishing synthesis of research done in the last twenty years and is the first truly compendious synthesis on wild canids. Beginning with a complete account of all 36 canid species, there follow six review chapters that emphasise topics most relevant to canid conservation science, including evolution and systematics, behavioural ecology, population genetics, diseases, conflict/control of troublesome species, and conservation tools. Fifteen detailed case studies then delve deeply into the very best species investigations currently available written by all the leading figures in the field. Much of the material is previously unpublished and will make fascinating reading far beyond the confines of canid specialists. These chapters portray the unique attributes of wild canids, their fascinating (and conflictive) relationship with man, and suggestions for future research and conservation measures for the Canidae. While most canid species are widespread and thrive in human dominated landscapes, several are in severe jeopardy; habitat loss, illegal hunting, persecution by farmers and disease all imperil dwindling populations. A final chapter analyses the requirements of, and approaches to, practical conservation, with lessons that go far beyond the dog family. It concentrates particular attention on priorities for the protection of the most threatened canid species, including the red wolf, African wild dog, Ethiopian wolf, Island fox and Darwin's fox.

The wild canids provide examples that will thrill the evolutionary biologists and theoretician, enthrall the natural historian and challenge the conservationist and wildlife manager. Anybody interested in evolutionary and behavioural biology, in mammals, in the environment, or in conservation will find much that is new and enriching in this book.

### From reader reviews:

#### **Selma McDaniel:**

Do you considered one of people who can't read enjoyable if the sentence chained within the straightway, hold on guys this specific aren't like that. This The Biology and Conservation of Wild Canids book is readable through you who hate those straight word style. You will find the data here are arrange for enjoyable examining experience without leaving perhaps decrease the knowledge that want to supply to you. The writer of The Biology and Conservation of Wild Canids content conveys prospect easily to understand by lots of people. The printed and e-book are not different in the content material but it just different as it. So , do you still thinking The Biology and Conservation of Wild Canids is not loveable to be your top record reading book?

#### **Christine Mata:**

Reading a reserve tends to be new life style in this era globalization. With studying you can get a lot of information that can give you benefit in your life. Having book everyone in this world can easily share their idea. Publications can also inspire a lot of people. Lots of author can inspire their own reader with their story or maybe their experience. Not only the story that share in the publications. But also they write about the data about something that you need example. How to get the good score toefl, or how to teach your children, there are many kinds of book that exist now. The authors these days always try to improve their expertise in writing, they also doing some exploration before they write with their book. One of them is this The Biology and Conservation of Wild Canids.

#### **Lorenzo Davis:**

Is it a person who having spare time after that spend it whole day by means of watching television programs or just laying on the bed? Do you need something totally new? This The Biology and Conservation of Wild Canids can be the response, oh how comes? A book you know. You are so out of date, spending your spare time by reading in this new era is common not a geek activity. So what these ebooks have than the others?

#### **Lillian Thornton:**

What is your hobby? Have you heard that question when you got students? We believe that that issue was given by teacher to their students. Many kinds of hobby, All people has different hobby. And also you know that little person just like reading or as looking at become their hobby. You need to know that reading is very important and also book as to be the matter. Book is important thing to increase you knowledge, except your teacher or lecturer. You find good news or update regarding something by book. Different categories of books that can you choose to use be your object. One of them is this The Biology and Conservation of Wild Canids.
