Membrane Receptors, Channels and Transporters in Pulmonary Circulation: 661 (Advances in Experimental Medicine and Biology)

Membrane Receptors, Channels and Transporters in Pulmonary Circulation: 661 (Advances in Experimental Medicine and Biology)

Membrane Receptors, Channels and Transporters in Pulmonary Circulation is a proceeding of the 2008 Grover Conference (Lost Valley Ranch and Conference Center, Sedalia, Colorado; September 3-7, 2008), which provided a forum for experts in the fields of those receptors, channels and transporters that have been identified as playing key roles in the physiology and pathophysiology of the pulmonary circulation. The book rigorously addresses: i) recent advances in our knowledge of receptors, channels and transporters and their role in regulation of pulmonary vascular function; ii) how modulation of expression and function of receptors, channels and transporters and their interrelationships contribute to the pathogenesis of pulmonary vascular disease; and iii) the therapeutic opportunities that may be revealed by enhancing our understanding of this area.

The overall goal was to explore the mechanisms by which specific receptors, channels and transporters contribute to pulmonary vascular function in both health and disease, and how this knowledge may lead to novel interventions in lung dysplasia, pulmonary edema, lung injury, and pulmonary and systemic hypertension to reduce and prevent death from lung disease.

Membrane Receptors, Channels and Transporters in Pulmonary Circulation is divided into six parts. Part I (Ion Channels in the Pulmonary Vasculature: Basics and New Findings) is designated for basic knowledge and recent findings in the research field of ion channels in pulmonary circulation. There are five chapters in Part I discussing the function, expression, distribution and regulation of various ion channels present in pulmonary vascular smooth muscle cells and how these channels are integrated to regulate intracellular Ca^{2+} and cell functions. Part II (TRP Channels in the Pulmonary Vasculature: Basics and New Findings) is composed of five chapters that are exclusively designed to discuss the role of a recently identified family of cation channels, transient receptor potential (TRP) channels, in the regulation of pulmonary vascular tone and arterial structure. Part III (Pathogenic Role of Ion Channels in Pulmonary Vascular Disease) includes four chapters that discuss how abnormal function and expression of various ion channels contribute to changes in cell functions and the development of pulmonary hypertension. Part IV (Receptors and Signaling Cascades in Pulmonary Arterial Hypertension) consists of five chapters devoted to the role of bone morphogenetic protein receptors, Notch receptors, serotonin receptors, Rho kinase and vascular endothelial growth factor receptors in the development of pulmonary arterial hypertension. Part V (Receptors and Transporters: Role in Cell Function and Hypoxic Pulmonary Vasoconstriction) includes four chapters designed to illustrate the potential mechanisms involved in oxygen sensing and hypoxia-induced pulmonary vasoconstriction and hypertension. Part VI (Targeting Ion Channels and Membrane Receptors in Developing Novel Therapeutic Approaches for Pulmonary Vascular Disease) consists five chapters which discuss the translational research involving on membrane receptors, channels and transporters, including their potential as novel drug targets.

We hope that Membrane Receptors, Channels and Transporters in Pulmonary Circulation will allow readers to foster new concepts and new collaborations and cooperations among investigators so as to further understand the role of receptors, channels and transporters in lung pathophysiology. The ultimate goal is to identify new mechanisms of disease, as well as new therapeutic targets for pulmonary vascular diseases. An additional outcome should be enhanced understanding of the role of these entities in systemic vascular pathophysiology, since the conference will include researchers and clinicians with interests in both pulmonary and systemic circulations.

From reader reviews:

Daniel Weimer:

What do you concerning book? It is not important together with you? Or just adding material if you want something to explain what the one you have problem? How about your extra time? Or are you busy individual? If you don't have spare time to complete others business, it is gives you the sense of being bored faster. And you have spare time? What did you do? Every person has many questions above. They should answer that question since just their can do this. It said that about book. Book is familiar in each person. Yes, it is right. Because start from on kindergarten until university need that Membrane Receptors, Channels and Transporters in Pulmonary Circulation: 661 (Advances in Experimental Medicine and Biology) to read.

Stacey Samuels:

The event that you get from Membrane Receptors, Channels and Transporters in Pulmonary Circulation: 661 (Advances in Experimental Medicine and Biology) is a more deep you excavating the information that hide inside words the more you get considering reading it. It doesn't mean that this book is hard to understand but Membrane Receptors, Channels and Transporters in Pulmonary Circulation: 661 (Advances in Experimental Medicine and Biology) giving you buzz feeling of reading. The article author conveys their point in a number of way that can be understood through anyone who read that because the author of this guide is well-known enough. This particular book also makes your vocabulary increase well. It is therefore easy to understand then can go along with you, both in printed or e-book style are available. We suggest you for having that Membrane Receptors, Channels and Transporters in Pulmonary Circulation: 661 (Advances in Experimental Medicine and Biology) instantly.

Emily Higginbotham:

This Membrane Receptors, Channels and Transporters in Pulmonary Circulation: 661 (Advances in Experimental Medicine and Biology) tend to be reliable for you who want to be considered a successful person, why. The reason of this Membrane Receptors, Channels and Transporters in Pulmonary Circulation: 661 (Advances in Experimental Medicine and Biology) can be one of the great books you must have will be giving you more than just simple reading food but feed you actually with information that possibly will shock your earlier knowledge. This book will be handy, you can bring it almost everywhere and whenever your conditions throughout the e-book and printed types. Beside that this Membrane Receptors, Channels and Transporters in Pulmonary Circulation: 661 (Advances in Experimental Medicine and Biology) giving you an enormous of experience for example rich vocabulary, giving you test of critical thinking that we all know it useful in your day exercise. So , let's have it and enjoy reading.

Dorothy Alvarez:

Publication is one of source of know-how. We can add our knowledge from it. Not only for students and also native or citizen have to have book to know the update information of year for you to year. As we know

those textbooks have many advantages. Beside many of us add our knowledge, also can bring us to around the world. By book Membrane Receptors, Channels and Transporters in Pulmonary Circulation: 661 (Advances in Experimental Medicine and Biology) we can take more advantage. Don't you to definitely be creative people? For being creative person must love to read a book. Just choose the best book that acceptable with your aim. Don't end up being doubt to change your life by this book Membrane Receptors, Channels and Transporters in Pulmonary Circulation: 661 (Advances in Experimental Medicine and Biology). You can more appealing than now.

Download and Read Online Membrane Receptors, Channels and Transporters in Pulmonary Circulation: 661 (Advances in Experimental Medicine and Biology) #45Q9AYT3FNH

Read Membrane Receptors, Channels and Transporters in Pulmonary Circulation: 661 (Advances in Experimental Medicine and Biology) for online ebook

Membrane Receptors, Channels and Transporters in Pulmonary Circulation: 661 (Advances in Experimental Medicine and Biology) Free PDF download, audio books, books to read, good books to read, cheap books, good books, online books, books online, book reviews epub, read books online, books to read online, online library, greatbooks to read, PDF best books to read, top books to read Membrane Receptors, Channels and Transporters in Pulmonary Circulation: 661 (Advances in Experimental Medicine and Biology) books to read online.
