## **Life Cycle Assessment in Industry and Business: Adoption Patterns, Applications and Implications**

Paolo Frankl, Frider Rubik

1.1 Life Cycle Assessment (LeA): a fascinating and sophisticated tool The greening of the economy is not a new task, but it is a challenge for which a lot of tasks still have to be done. It is known that the main source of environmental deterioration by industry is not any more the chimneys and other process related emissions, but the products and services produced. Products are regarded as carriers of pollution: they are not only a potential source of pollution and waste during their use; they are also a cause of resource depletion, energy consumption, and emissions during their life starting with the extraction of the raw materials and ending with their disposal (i.e. connecting production and consumption stages). The challenge of these decades is now the greening of products and services. The new focus on products (cp. Oosterhuis/Rubik/Schol 1996) was introduced as a policy approach of shared responsibility in which different actors are involved along the life-cycle of a product, each having specific responsibilities.
