Spatial Data Analysis: Models, Methods and Techniques (SpringerBriefs in Regional Science)

Manfred M. Fischer, Jinfeng Wang

Spatial Data Analysis: Models, Methods and Techniques (SpringerBriefs in Regional Science) Manfred M. Fischer, Jinfeng Wang

The availability of spatial databases and widespread use of geographic information systems has stimulated increasing interest in the analysis and modelling of spatial data. Spatial data analysis focuses on detecting patterns, and on exploring and modelling relationships between them in order to understand the processes responsible for their emergence. In this way, the role of space is emphasised, and our understanding of the working and representation of space, spatial patterns, and processes is enhanced. In applied research, the recognition of the spatial dimension often yields different and more meaningful results and helps to avoid erroneous conclusions. This book aims to provide an introduction into spatial data analysis to graduates interested in applied statistical research. The text has been structured from a data-driven rather than a theory-based perspective, and focuses on those models, methods and techniques which are both accessible and of practical use for graduate students. Exploratory techniques as well as more formal model-based approaches are presented, and both area data and origin-destination flow data are considered.

From reader reviews:

Eric McDonald:

Hey guys, do you want to find a new book to study? Maybe the book with the title Spatial Data Analysis: Models, Methods and Techniques (SpringerBriefs in Regional Science) suitable to you? Typically the book was written by a renowned writer in this era. The book titled Spatial Data Analysis: Models, Methods and Techniques (SpringerBriefs in Regional Science) is one of several books that everyone reads now. This particular book has inspired many people in the world. When you read this guide you will enter the new dimensions that you never knew before. The author explained their plan in a simple way, and so all of us can easily be aware of the core of this book. This book will give you a large amount of information about this world now. So that you can see the representation of the world on this book.

Betty Dansby:

Reading a publication tends to be a new life style within this era of globalization. With looking at you can get a lot of information that will give you benefit in your life. Having a book everyone in this world may share their idea. Publications can also inspire a lot of people. Many authors can inspire their own readers with their story or perhaps their experience. Not only the story that is shared in the books, but also they write about advantages about something that you need case in point. How to get a good score on TOEFL, or how to teach your young ones, there are many kinds of books that exist now. The authors these days always try to improve their skill in writing, they also do some exploration before they write the book. One of them is this Spatial Data Analysis: Models, Methods and Techniques (SpringerBriefs in Regional Science).

Wayne Queen:

In this era which is the greater man or woman or who has ability in doing something more are more treasured than others. Do you want to become considered one of them? It is just a simple approach to have that. What you should do is just spending your time little but quite enough to have a look at some books. One of the books in the top checklist in your reading list will be Spatial Data Analysis: Models, Methods and Techniques (SpringerBriefs in Regional Science). This book that is qualified as The Hungry Mountains can get you closer in turning out to be a precious person. By looking up and reviewing this e-book you can get many advantages.

Richard Starkes:

As we know that a book is an essential thing to add our expertise for everything. By a reserve we can know everything we would like. A book is a group of written, printed, illustrated or even blank sheets. Every year was exactly added. This publication Spatial Data Analysis: Models, Methods and Techniques (SpringerBriefs in Regional Science) was filled in relation to science. Spend your free time to add your knowledge about your technology competence. Some people have diverse feelings when they read some sort of book. If you know how big an advantage a book has, you can truly feel joy to read a book. In the modern era

like right now, many ways to get book that you wanted.
