Life Itself: Exploring the Realm of the Living Cell Boyce Rensberger

Hidden in a nondescript red-brick building in Rockville, Maryland, is the most unusual warehouse in the world, a bank of living cells called the American Type Culture Collection. Here, at 321 degrees below zero--a temperature at which life abandons its vital dance and enters limbo, but without dying--are some 30,000 vials holding 60 billion living forms in suspended animation, including mouse kidney cells, turkey blood cells, armadillo spleen cells, and some 40 billion human cells. These cultured cells are essential to modern biological research--in fact, cells today are the most intimately studied life forms in all of science, for both practical and philosophical reasons. For one, all disease--from cancer and the common cold, to arthritis and AIDS--stems from cells gone awry. And cell research not only promises a cure for a wide variety of disease--it also holds the key to the mystery of life itself.

In *Life Itself*, Boyce Rensberger, science writer for *The Washington Post*, takes readers to the frontlines of cell research with some of the brightest investigators in molecular, cellular, and developmental biology. Virtually all the hottest topics in biomedical research are covered here, such as how do cells and their minute components move? How do the body's cells heal wounds? What is cancer? Why do cells die? And what is the nature of life? Readers discover that--contrary to what we may have concluded from pictures in our high school textbooks--cells teem with activity and that, inside, they "are more crowded with components than the inside of a computer." We learn that scientists now know of at least ten molecular motors that move things about inside the cell--in most cells, this motion is short because the cell is tiny, but in the single-celled nerve fibers that run from the base of the spinal cord to the toes (measuring three or four feet in an adult human), molecular motors can take several days to make the trip. Rensberger describes the many fascinating kinds of cells found in the body, from "neural crest cells" (early in embryonic development, these cells crawl all over the embryo to the sites where they will pursue their fate--as nerve cells, or cartilage, or skin), to "dust cells" (nomadic cells in the lung that swallow and store indigestible particles, then migrate to the gullet where they themselves are swallowed and digested), to "natural killer cells" (millions of which roam the body looking for cancerous cells). We meet many of the scientists who have pioneered cell research, such as Rita Levi-Montalcini--an Italian who, shut out of her lab during World War II, continued to experiment in her bedroom at home, making the discovery ("nerve growth factor") for which she won the Nobel Prize--and American Leonard Hayflick, who proved that all human cells (except cancer cells) invariably die after about fifty divisions. Rensberger also provides an illuminating discussion of AIDS--revealing exactly why this virus is so difficult to defeat--and of cancer, explaining that before cancer can start, a whole series of rare events must occur, events so unlikely that it seems a wonder that anyone gets cancer at all. The solutions to the most pressing challenges facing scientists today--from the efforts to conquer disease to the quest to understand life itself--will be found in the innermost workings of the cell. In *Life Itself*, Boyce Rensberger paints a colorful and fascinating portrait of modern research in this vital area, an account which will enthral anyone interested in state-of-the-art science or the incredible workings of the human body.

From reader reviews:

Hans Diaz:

Do you have favorite book? For those who have, what is your favorite's book? Reserve is very important thing for us to know everything in the world. Each reserve has different aim or maybe goal; it means that book has different type. Some people really feel enjoy to spend their the perfect time to read a book. They may be reading whatever they have because their hobby will be reading a book. Think about the person who don't like studying a book? Sometime, man or woman feel need book whenever they found difficult problem or even exercise. Well, probably you will want this Life Itself: Exploring the Realm of the Living Cell.

Christa Nisbet:

Reading can called head hangout, why? Because when you are reading a book specially book entitled Life Itself: Exploring the Realm of the Living Cell your mind will drift away trough every dimension, wandering in each and every aspect that maybe unfamiliar for but surely might be your mind friends. Imaging every single word written in a reserve then become one application form conclusion and explanation in which maybe you never get prior to. The Life Itself: Exploring the Realm of the Living Cell giving you a different experience more than blown away your mind but also giving you useful information for your better life in this particular era. So now let us show you the relaxing pattern at this point is your body and mind are going to be pleased when you are finished reading through it, like winning a. Do you want to try this extraordinary investing spare time activity?

Robert Crawford:

Many people spending their time period by playing outside using friends, fun activity using family or just watching TV all day long. You can have new activity to invest your whole day by studying a book. Ugh, do you consider reading a book will surely hard because you have to accept the book everywhere? It ok you can have the e-book, getting everywhere you want in your Touch screen phone. Like Life Itself: Exploring the Realm of the Living Cell which is keeping the e-book version. So , why not try out this book? Let's observe.

Marjorie Cook:

Is it an individual who having spare time then spend it whole day by simply watching television programs or just telling lies on the bed? Do you need something totally new? This Life Itself: Exploring the Realm of the Living Cell can be the solution, oh how comes? A fresh book you know. You are so out of date, spending your spare time by reading in this brand new era is common not a geek activity. So what these books have than the others?
