An Introduction to Methods and Models in Ecology, Evolution, and Conservation Biology

An Introduction to Methods and Models in Ecology, Evolution, and Conservation Biology

This unique textbook introduces undergraduate students to quantitative models and methods in ecology, behavioral ecology, evolutionary biology, and conservation. It explores the core concepts shared by these related fields using tools and practical skills such as experimental design, generating phylogenies, basic statistical inference, and persuasive grant writing. And contributors use examples from their own cutting-edge research, providing diverse views to engage students and broaden their understanding.

This is the only textbook on the subject featuring a collaborative "active learning" approach that emphasizes hands-on learning. Every chapter has exercises that enable students to work directly with the material at their own pace and in small groups. Each problem includes data presented in a rich array of formats, which students use to answer questions that illustrate patterns, principles, and methods. Topics range from Hardy-Weinberg equilibrium and population effective size to optimal foraging and indices of biodiversity. The book also includes a comprehensive glossary.

In addition to the editors, the contributors are James Beck, Cawas Behram Engineer, John Gaskin, Luke Harmon, Jon Hess, Jason Kolbe, Kenneth H. Kozak, Robert J. Robertson, Emily Silverman, Beth Sparks-Jackson, and Anton Weisstein.

- Provides experience with hypothesis testing, experimental design, and scientific reasoning
- Covers core quantitative models and methods in ecology, behavioral ecology, evolutionary biology, and conservation
- Turns "discussion sections" into "thinking labs"

Professors: A supplementary Instructor's Manual is available for this book. It is restricted to teachers using the text in courses. For information on how to obtain a copy, refer to:

From reader reviews:

Marlene Childs:

In this 21st century, people become competitive in every single way. By being competitive now, people have to do something to make these people survive, being in the middle of the crowded place and notice by means of surrounding. One thing that sometimes many people have underestimated that for a while is reading. Yep, by reading a reserve your ability to survive improve then having chance to remain than other is high. For yourself who want to start reading the book, we give you this kind of An Introduction to Methods and Models in Ecology, Evolution, and Conservation Biology book as beginning and daily reading guide. Why, because this book is more than just a book.

Patricia Skinner:

Information is provisions for anyone to get better life, information nowadays can get by anyone on everywhere. The information can be a information or any news even an issue. What people must be consider any time those information which is from the former life are hard to be find than now is taking seriously which one is appropriate to believe or which one typically the resource are convinced. If you find the unstable resource then you get it as your main information it will have huge disadvantage for you. All of those possibilities will not happen inside you if you take An Introduction to Methods and Models in Ecology, Evolution, and Conservation Biology as your daily resource information.

Richard Vedder:

Your reading sixth sense will not betray a person, why because this An Introduction to Methods and Models in Ecology, Evolution, and Conservation Biology e-book written by well-known writer we are excited for well how to make book that may be understand by anyone who else read the book. Written within good manner for you, leaking every ideas and writing skill only for eliminate your own hunger then you still question An Introduction to Methods and Models in Ecology, Evolution, and Conservation Biology as good book not just by the cover but also by content. This is one reserve that can break don't judge book by its handle, so do you still needing yet another sixth sense to pick that!? Oh come on your reading through sixth sense already said so why you have to listening to an additional sixth sense.

Edna Dixon:

Reading a publication make you to get more knowledge from the jawhorse. You can take knowledge and information from a book. Book is created or printed or illustrated from each source in which filled update of news. In this modern era like currently, many ways to get information are available for anyone. From media social similar to newspaper, magazines, science book, encyclopedia, reference book, novel and comic. You can add your knowledge by that book. Are you ready to spend your spare time to spread out your book? Or just looking for the An Introduction to Methods and Models in Ecology, Evolution, and Conservation Biology when you desired it?
