Foot and Ankle Motion Analysis: Clinical Treatment and Technology (Biomedical Engineering) Gerald F. Harris, Peter A. Smith

Human motion analysis or gait analysis is used throughout the country and the world in clinics for pre-surgical planning and postsurgical follow-up. Only recently have technological advances truly begun to meet medical needs by supplying more accurate analytical data from which to make educated assessments of dynamic foot and ankle pathology. A comprehensive overview of current and emerging methods is necessary for practitioners to effectively integrate the new techniques into better pre-treatment planning, surgical and rehabilitative care, and post-treatment follow-up.

Originating as a one-day workshop sponsored by the Shriner's Hospitals and the National Institutes of Health, **Foot and Ankle Motion Analysis: Clinical Treatment and Technology** provides a single source reference for the latest technologies and their clinical applications. With contributions from an international panel of experts from orthopaedic, rehabilitation, engineering, academic, medical-industrial, and clinical disciplines, this text focuses on the relevant scientific advances with an emphasis on applications, limitations, and problems to be solved. Divided into two parts, the text begins by presenting basic and advanced clinical applications and opportunities in foot and ankle motion analysis in both pediatric and adult cases. The second part introduces the technological advances themselves from a quantitative perspective. Modeling concepts, seminal developments, and novel approaches are described along with emerging horizons related to mechanical paradigms, imaging, kinetics, robotics and simulation, tri-planar force sensing, and more. The book also includes a chapter of references and sources of support for future research and development prospects.

Clinical and research applications in motion analysis have resulted in better functional assessment, fewer, more effective surgeries, and longer-term follow-up care. **Foot and Ankle Motion Analysis: Clinical Treatment and Technology** provides a basis for expanding these contributions to the broader community of practitioners caring for both adult and pediatric patients.

From reader reviews:

Deborah Knight:

The book Foot and Ankle Motion Analysis: Clinical Treatment and Technology (Biomedical Engineering) can give more knowledge and also the precise product information about everything you want. So just why must we leave a very important thing like a book Foot and Ankle Motion Analysis: Clinical Treatment and Technology (Biomedical Engineering)? A number of you have a different opinion about e-book. But one aim in which book can give many info for us. It is absolutely suitable. Right now, try to closer with your book. Knowledge or details that you take for that, you can give for each other; it is possible to share all of these. Book Foot and Ankle Motion Analysis: Clinical Treatment and Technology (Biomedical Engineering) has simple shape but you know: it has great and large function for you. You can search the enormous world by open and read a e-book. So it is very wonderful.

Calvin Lee:

Book is to be different for every single grade. Book for children till adult are different content. As you may know that book is very important usually. The book Foot and Ankle Motion Analysis: Clinical Treatment and Technology (Biomedical Engineering) had been making you to know about other know-how and of course you can take more information. It is quite advantages for you. The e-book Foot and Ankle Motion Analysis: Clinical Treatment and Technology (Biomedical Engineering) is not only giving you much more new information but also for being your friend when you really feel bored. You can spend your personal spend time to read your book. Try to make relationship with all the book Foot and Ankle Motion Analysis: Clinical Treatment and Technology (Biomedical Engineering). You never feel lose out for everything in case you read some books.

Ruth Morefield:

Reading a e-book can be one of a lot of exercise that everyone in the world loves. Do you like reading book and so. There are a lot of reasons why people like it. First reading a reserve will give you a lot of new information. When you read a publication you will get new information because book is one of many ways to share the information or perhaps their idea. Second, looking at a book will make a person more imaginative. When you examining a book especially fiction book the author will bring you to imagine the story how the figures do it anything. Third, you are able to share your knowledge to other individuals. When you read this Foot and Ankle Motion Analysis: Clinical Treatment and Technology (Biomedical Engineering), you could tells your family, friends and also soon about yours guide. Your knowledge can inspire the others, make them reading a guide.

Diana Gum:

Reading a reserve tends to be new life style with this era globalization. With reading through you can get a lot of information that could give you benefit in your life. With book everyone in this world can certainly

share their idea. Ebooks can also inspire a lot of people. A lot of author can inspire their reader with their story or their experience. Not only the storyplot that share in the guides. But also they write about advantage about something that you need example of this. How to get the good score toefl, or how to teach your young ones, there are many kinds of book that you can get now. The authors on this planet always try to improve their talent in writing, they also doing some exploration before they write for their book. One of them is this Foot and Ankle Motion Analysis: Clinical Treatment and Technology (Biomedical Engineering).
