All organisms--from the AIDS virus, to bacteria, to fish, to humans--must evolve to survive. Despite the central place of evolution within biology, there are many things that are still poorly understood. For Charles Darwin, the driving force behind all evolution was natural selection. More recently, evolutionary biologists have considered that many mutations are essentially neutral with respect to natural selection. Many questions remain. Are molecular differences between species adaptive? Are differences within species adaptive? Modern biotechnology has enabled us to identify precisely the actual DNA structure from many individuals within a population, and thus to see how these DNA sequences have changed over time and to answer some of these questions. At the same time, this knowledge poses new challenges to our ability to understand the observed patterns. This exciting volume outlines the biological problems, provides new perspectives on theoretical treatments of the consequences of natural selection, examines the consequences of molecular data, and relates molecular events to speciation. Every evolutionary biologist will find it of interest.

From reader reviews:

Rose Rowe:

As people who live in the particular modest era should be revise about what going on or info even knowledge to make all of them keep up with the era that is certainly always change and move ahead. Some of you maybe will certainly update themselves by reading through books. It is a good choice for you but the problems coming to a person is you don't know which you should start with. This Non-Neutral Evolution: Theories and Molecular Data is our recommendation so you keep up with the world. Why, since this book serves what you want and need in this era.

Anna Yates:

Information is provisions for those to get better life, information currently can get by anyone from everywhere. The information can be a information or any news even a problem. If you have the unstable resource then you have it as your main information there will be huge disadvantage for you. All those possibilities will not happen with you if you take Non-Neutral Evolution: Theories and Molecular Data as the daily resource information.

Martha Skaggs:

The book Non-Neutral Evolution: Theories and Molecular Data will bring you to definitely the new experience of reading the book. The author style to elucidate the idea is very unique. Should you try to find new book you just read, this book very appropriate to you. The book Non-Neutral Evolution: Theories and Molecular Data is much recommended to you to see. You can also get the e-book through the official web site, so you can quicker to read the book.

Judith Roemer:

Do you have something that you prefer such as book? The reserve lovers usually prefer to pick book like comic, limited story and the biggest you are novel. Now, why not attempting Non-Neutral Evolution: Theories and Molecular Data that give your fun preference will be satisfied by reading this book. Reading behavior all over the world can be said as the opportunity for people to know world better then how they react in the direction of the world. It can't be claimed constantly that reading addiction only for the geeky man but for all of you who wants to be success person. So , for all of you who want to start reading through as your good habit, you can pick Non-Neutral Evolution: Theories and Molecular Data become your own personal starter.
