## **Developing Services for the Wireless Internet** Maurizio Morisio, Marco Torchiano

The book supports the developers of services and applications for mobile phones, PDAs and smart phones. This new emerging domain is characterized by a very fast pace of change in the underlying technology, exposing products and applications to a constant risk of obsolescence. The relative youth of this field means that knowledge is comparatively limited. The book identifies an approach to mitigate the above risks by focusing on: The development process The underlying technology and its effects on connectivity Software architectures Developing Services for the Wireless Internet offers state-of-the-art technological knowledge and practical know-how to both practitioners – project managers, software architects and designers, process engineers and quality assurance workers, as well as academics and researchers looking to broaden their theoretical outlook. This book is an essential tool for all working in this field.
